The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-6,8,9,11,12,14-17,19,20 are rejected under 35 U.S.C. 102(e) as being anticipated by Kostylev, "K"

The applied reference has a common assignee and inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

The previous rejection still applies. The new limitation threshold switching material comprising a "chalcogen" element clearly does not structurally distinguish over K because chalcogen is precisely the material of K. Note also that applicant would have to prove that the chalcogen programmable material of K is not or could not be a threshold switching material, as such language is functional. There is no evidence that the chalcogen material of K is not a "threshold switching material". See also *In re Swinehart* 169 USPQ 226, *In re Pearson* 181 USPQ 641, and *Ex parte Minks* 169 USPQ 120 on labels, statements of intended use, and functional material, as we have here in "threshold switching material", all of which make it clear that applicant has the burden to show the applied art cannot function in the manner claimed.

Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record does not teach a silicon nitride dielectric layer between a chalcogenide switch and a programmable resistance material.

Applicant's arguments filed 3/4/5 have been fully considered but they are not persuasive. Arguments that the chalcogen material of K is not a "threshold switching material" is unpersuasive as shown above. First, "threshold switching" is functional language and applicant has not shown that K cannot function in this manner. Secondly, the chalcogen material of K is a "threshold switching material" because it is a "phase change material".

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
